- 0.19% of State total
- 1 Death
- 2% of State total

Florida

- 3904 Laboratory confirmed cases
- 9% of National total
- 536 Hospitalized
- 8% of National total
- 48 Deaths
- 11% of National total

FL state lab data so far

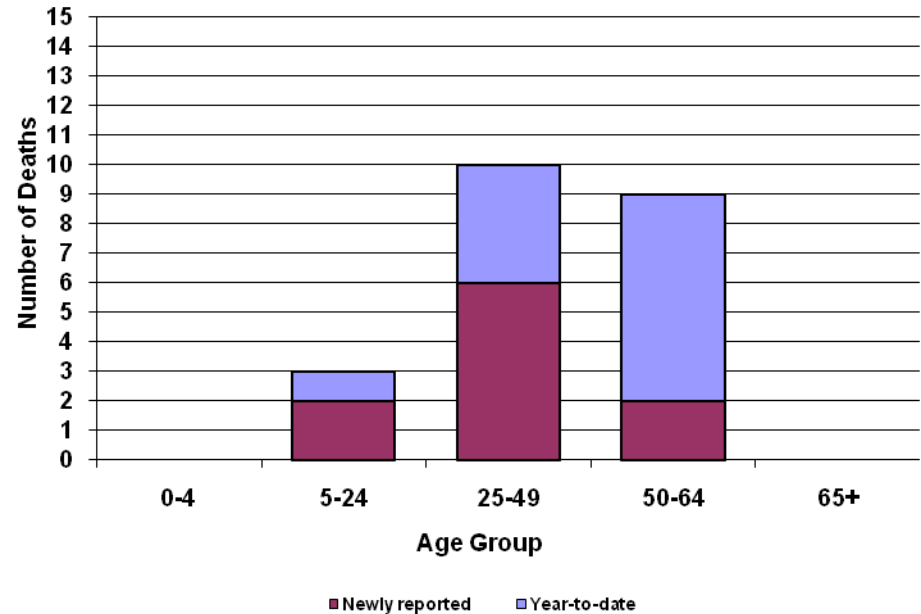

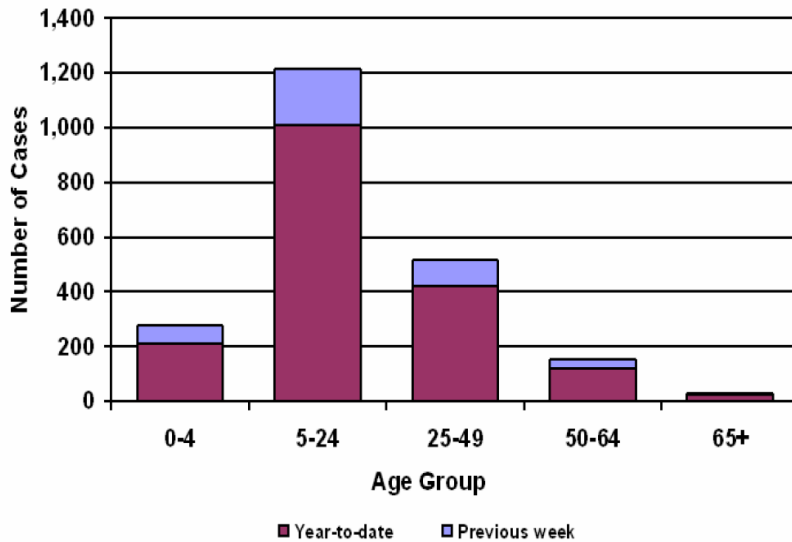

- Sudden increase week 17 due to H1N1 publicity
- New virus has rapidly replaced last winter's
- About 275 positives per week

cases and death by age groups

Deaths are occurring in older age groups than cases

Confirmed and probable cases by age, Florida

H1N1 vaccination information

Many unknowns but H1N1 vaccine expected in mid-October

Priority groups are:

- Pregnant women

- People who live with or care for children younger than 6 months

- Health care and emergency services personnel

- Persons between 6 months and 24 years of age

- People between 25-64 with other health risks

Shands/UF is working with state and local health departments to receive and administer vaccinations at Shands and UF campus

FLORIDA

What Can Faculty DO?

- Understand that students will be ill and be flexible
- Encourage students who are ill to isolate themselves for 24 hours after fever is resolved
- Encourage covering of cough
- Encourage frequent hand washing
- Encourage students to call the SHCC if needed
